ATTENTION ARTICLE MARKETERS: Here's How You Can Create High Quality, Unique Articles More Quickly and Easier than Ever Before... Revolutionary Software Suite almost instantly helps you create unique articles, so you get better search engine rankings, more site visitors... and make more money. Whether you write articles yourself or use PLR content to fill out your sites and blogs this software is going to make a massive difference to you. Spin Master Pro is a suite of TWO brand new software products that make writing spinnable articles or turning existing PLR content into unique spun content a breeze. Power Tool #1: Spin Writer Pro. Spin Writer Pro gives you the perfect blend of the speed of auto spinning with the quality output associated with manual writing. So what is it? It's a specially designed

editing tool with synonym look up that can generate spyntax as you go. This means you can put the spin variations in as you write and when you're done push a button and produce loads of unique versions of the same article. In the time it takes you to do one article you are getting twenty, fifty or even a hundred unique spun versions. And this isn't limited to writing your own articles... Most of us have hard drive full of PLR content that we rarely use because its not unique and if you run it through an auto-spinner the results are dubious at best. With Spin Writer Pro you can quickly zip through any article, highlight words and drop in suitable synonyms in spyntax format. You can save your spinnable version with its spyntax in place (suitable for direct uploading to sites and services that spin for you, or push a button and use the built in spin generator to create multiple spun variations on the spot. Its so quick and easy to use! If you can use a basic wordprocessor or editor (like notepad) you'll find using Spin Writer Pro childs play. Check out the exciting features: * Massive Synonym Library Built in: Highlight a word and the software suggests suitable spinnable words. * Builds the spyntax for you. Choose your synonyms and push a button and the spin code is put straight into your article automatically. * Built in article spinner. Just tell Spin Writer how many versions of your article you want and push a button. It really is that simple! * Nested Spyntax support. Unlike many other spin tools, Spin Writer Pro supports nested spyntax (with no limit on how many levels deep). This level of power is usually only found in high-end spinning solutions. * Full Spell Checker. Just like a word processor you can spell check your document at the push of a button. Don't risk sending out articles with silly spelling mistakes? Power Tool #2 - Easy Auto Spinner. Although I recommend that you create all your spun content using the power of Spin Writer, there are times when you just need to quickly pump out some variations of PLR articles quickly and without any manual editing. So included in the Spin Master Pro Suite is 'Easy Auto Spinner'. Just give Easy Auto Spinner a folder that contains PLR text files and an output folder for the spun content, decide how unique you want it to make the content and click a button. Just minutes later you will have fresh, unique versions of those articles ready for use. The PLR text files don't have to have any spyntax or special codes in them, they are just plain old regular PLR text files. Easy Auto Spinner will spit out spun versions using one of two methods (or it can use both methods at once). And each time you run Easy Auto Spinner on a folder it will produce different spun content. * No 'spyntax' needed. Just feed in plain text files and Easy Auto Spinner does the rest. * Extensive Synonym List: The program has an extensive but sensible synonym list. Although no fully automatic system is going to be perfect these synonyms have been carefully selected so you are

less likely to end up with jibberish sentences. * Two reliable spinning methods. Use either or both. And the settings are a doddle, just adjust a couple of simple slide controls and check a tick box or two. It's just so easy!
