

# Computational Acoustics Of Noise Propagation In Fluids - Finite And Boundary Element Methods

[DOWNLOAD HERE](#)

Part I FEM: Numerical Aspects - 1 Dispersion, Pollution, and Resolution.- 2 Different Types of Finite Elements.- 3 Multifrequency Analysis using Matrix Pad e via Lanczos.- 4 Computational Aeroacoustics based on Lighthill s Acoustic Analogy.- Part II FEM: External Problems- 5 Computational Absorbing Boundaries.- 6 PerfectlyMatched Layers.- 7 Infinite Elements.- 8 Efficient Infinite Elements based on Jacobi Polynomials.- Part III FEM: Related Problems- 9 Fluid Structure Acoustic Interaction.- 10 Energy Finite Element Method.- Part IV BEM: Numerical Aspects- 11 Discretization Requirements.- 12 Fast Solution Methods.- 13 Multi domain Boundary Element Method in Acoustics.- 14 Waveguide Boundary Spectral Finite Elements.- Part V BEM: External Problems- 15 Treating the Phenomenon of Irregular Frequencies.- 16 A Galerkin-type BE-formulation.- 17 Acoustical Radiation and Scattering above an Impedance Plane.- 18 Time Domain BEM.- Part VI BEM: Related Problems- 19 Coupling a Fast BEM with a FE-Formulation for Fluid Structure Interaction.- 20 Inverse BE-Techniques for the Holographic Identification of Vibro Acoustic Source Parameters EAN/ISBN : 9783540774488 Publisher(s): Springer, Berlin Format: ePub/PDF Author(s): Marburg, Steffen - Nolte, Bodo
