

Modern Charge-density Analysis

[DOWNLOAD HERE](#)

From the contents: 1. Introductory chapter.- 2. Charge, spin, momentum densities and related properties from ab initio simulation of crystalline solids.- 3. Charge density and thermal motion analysis.- 4. Past, present and future of charge density and density matrix refinements.- 5. Charge density and beyond : the interplay between theory and experiment.- 6. The complementary worlds of space and momentum electron densities.- 7. Charge density topological approaches and beyond from a theoretical perspective.- 8. Real and reciprocal space properties as mirrored in charge density studies.- 9. Intermolecular interactions : bonding, energy and thermodynamics from charge density studies.- 10. Charge density studies and chemistry : why and what.- 11. Charge density in materials and energy science.- 12. Charge density in life sciences.- 13. Charge density for smart crystal engineering.- 14. Spin densities in materials science.- 15. Evolution of charge density, bonding and properties at high pressure.- 16. ELF and phase transitions.- 17. Multi-temperature charge density studies.- 18. Time dependent charge density studies.- 19. Charge density and chemical reactions. EAN/ISBN : 9789048138364 Publisher(s): Springer, Berlin, Springer Netherlands Format: ePub/PDF Author(s): Gatti, Carlo - Macchi, Piero
