

Apphp Adminpanel

[DOWNLOAD HERE](#)

As a website owner or administrator, having the ability to manage or maintain your site in easiest way is essential. With a well thought out administrative back-end, you can track purchases, manage user registrations, news, mass mail functions, add/edit/delete products from your catalog etc. Everything you want to control on your site, you will want to include in the Administration Back-End. ApPHP AdminPanel provides you access to the control features of your site as creating static or dynamical pages and allows your easily manage database tables with embedded PHP DataGrid. It includes Creating, Reading, Updating and Deleting (CRUD) records in database tables on your existing site. You can edit menu options on fly and create new menu just in a few clicks. For a few minutes you get professional looking and fully functional Administration Panel for your new or existing site. ApPHP AdminPanel allows you to

create DataGrid pages, even without programming knowledge! It dramatically reduce the development time of your web application.
