

## Mp3 Formula - Time Of Day

[DOWNLOAD HERE](#)

Smooth progressive rock with soaring keyboards, wailing guitars and vocals that will take you on an emotional journey. 11 MP3 Songs ROCK: Progressive Rock, ROCK: 80's Rock Details: "FORMULA" was formed or formulated by a group of guys from the foothills of Appalachia in 1983. Heavily influenced by Journey, Yes, Moody blues, and Pink Floyd, the original members, Tom Baize, Danny Lusk, Larry Hall and L.E. Simpkins set about to create a style of original music that is built upon the influences of their youth. The idea was to incorporate original tunes into a cover set of songs to play live. Soon the group realized their best material was their own. This was very satisfying, however it was very difficult for the group to get their songs heard anywhere except in local nightclubs or community events. This limited their exposure quiet a bit. Remember, they were trying to play progressive rock music in a small country town. A couple of years into the project Paul Pigman stepped in to fill the void left by the death of Larry Hall. After several disappointing demo tries at larger studios, the group found the secret of keeping the music going and keeping the "FORMULA" alive and well. The Music continues to grow in style through experimentation with new ideas and new textures of modern music. No boundaries really in this formula. After making many demos in other studios, and experiencing a great deal of expense with little return, the group decided it was time invest in project home studios. LE started TIMESTUDIO in Buskirk Ky. followed by Tommy who invested in a similar studio, BAIZEWAVE STUDIO located in Pittsburgh. This seems to be the best way to expose the group's music to a broader audience. Work has begun on our second album, Expect it to be out in August of 2003. We feel this collection of our original songs is our best work yet. We look forward to your reviews and thoughts on the next album titled "PRIVATE WORLD". Tommy Baize and L.E. Simpkins are excited about future albums to come. So much material has yet to be developed for album format. New exciting ideas and sounds. STAY TUNED TO MORE FROM "FORMULA" .
