

Geotechnical Earthquake Engineering

[DOWNLOAD HERE](#)

Foreword by E.T.R. Dean- Preface- Acknowledgements- List of symbols- 1. Well known simplified models- 1.1 Introduction- 1.2 Source models of energy release by tectonic fault- 1.3 Sliding block model of co-seismic permanent slope displacement- 1.4 Single degree of freedom oscillator for vibration of a structure on rigid base- 1.5 Summary- 2. Soil properties- 2.1 Introduction- 2.2 Cyclic shear stiffness and material damping- 2.3 Static shear strengths of soils- 2.4 Cyclic shear strengths of soils- 2.5 The equivalent number of cycles concept- 2.6 Water permeability and volumetric compressibility- 2.7 Summary- 3. Seismic excitation- 3.1 Introduction- 3.2 Seismic hazard- 3.3 Factors affecting seismic hazard- 3.4 Short term seismic hazard assessment- 3.5 Long term seismic hazard assessment- 3.6 Summary- 4. Slope stability and displacement- 4.1 Introduction- 4.2 Slope stability- 4.3 Shear beam model for reversible displacement analysis- 4.4 Sliding block models for permanent displacement analysis- 4.5 Bouncing ball model of rock fall - 4.6 Simplified model for soil and rock avalanches, debris run-out and fast spreads analysis- 4.7 Summary- 5. Sand liquefaction and flow- 5.1 Introduction- 5.2 Conventional empirical methods- 5.3 Rotating cylinder model for liquefaction potential analysis of slopes- 5.4 Rolling cylinder model for analysis of flow failures- 5.5 Summary- 6. Dynamic soil foundation interaction- 6.1 Introduction- 6.2 Advanced and empirical methods- 6.3 Discrete element models- 6.4 Single degree of freedom oscillator on flexible base for piled foundations and flexural retaining walls- 6.5 Summary- 7. Bearing capacity and additional settlement of shallow foundation- 7.1 Introduction- 7.2 Bearing capacity: pseudo-static approaches- 7.3 Bearing capacity: effects of sub-surface liquefaction- 7.4 Bearing capacity: effects of structural inertia and eccentricity of load- 7.5 Additional settlement in granular soils- 7.6 Summary- 8. Seismic wave propagation effect on tunnels and shafts- 8.1 Introduction- 8.2 Wave propagation effect on cut and cover tunnels and shafts- 8.3 Wave refraction effect on deep tunnels and shafts- 8.4 Summary- 9. Comments on some frequent liquefaction potential mitigation measures- 9.1 Introduction- 9.2 Stone columns- 9.3 Soil mixing- 9.4 Excess water pressure relief wells- 9.5 Summary- Appendices - Ms Excel workbooks on compact disk- References- Index EAN/ISBN : 9781402086847
Publisher(s): Springer Netherlands Discussed keywords: Erdbeben Format: ePub/PDF Author(s): Ansal,
