ELECTRONIC: Pop Crossover, ELECTRONIC: Industrial Details: ----- Dark, intelligent, and edgy
electropop often compared to Wolfsheim, Covenant, Red Flag, Neuroactive and others like.... ----- "The
artwork/book for this CD is on par with - possibly even better - than you would get from a major label."
----- Excerpt by Legion for This is Corrosion (thisiscorrosion.com) Cost of Living, their debut album,
delivers a blend of synth and future pop, with lyrics that range from the politically-oriented, to the ever
popular relationship/emotion/feeling territory. If you're looking for a happy, poppy album, look elsewhere,
but you'll miss out on an album with a sound different enough to stand on its own and a quality that is
often missing in today's music. "Dirty Prophet", the third track, is a bit of political satire aimed firmly at a
certain President and his underlings. "Freedom", at first listen, sounds almost too synth-poppy, with its
sweeping synth lines and tinkling bell-like sounds, but when you listen closer, you'll find the lyrics conflict
with the music itself. With refrains like I'll be free when you're gone, I'll be free when you're dead and
buried, you know this is a song in disguise. I've always found these types of songs to be the most
interesting because of the contrast between music and lyrics, similar to songs like "Deep Red" and "Suffer
in Silence" from Apoptygma Berzerk. "Alive in You" adds a touch of the dark, moody sound, reminiscent of
Clan of Xymox, towards the end of the album. Overall, Cost of Living is an album that was clearly put
together with forethought, even down to the fantastic artwork. The sound is not the over-done synthpop
style, which is refreshing, and has a decent amount of vocal and musical variation to keep your attention.
The lyrics are well written and thought-provoking, making this an album you will enjoy on several different
levels. -----
