CONTENTS- Preface xxi- Acknowledgments xxvii- Frequently used Abbreviations and Notations xxix-

Chapter 1. Cosmic Ray Interactions in Space Plasmas 1- 1.1. Main properties of space plasma 1- 1.1.1. Neutrality of space plasma and Debay radius 1- 1.1.2. Conductivity and magnetic viscosity of space plasma 1- 1.1.3. The time of magnetic fields dissipation; frozen magnetic fields 1- 1.1.4. Transport path of ions in space plasma 2- 1.1.5. Space plasma as excited magneto-turbulent plasma 2- 1.1.6. Main channels of energy transformation in space plasma 2- 1.1.7. Particle acceleration in space plasma and the second fundamental law of thermodynamics 3- 1.2. Main properties and origin of CR 4- 1.2.1. Internal and external CR of different origin 4- 1.2.2. On the main properties of primary and secondary CR 4- 1.2.3. Five intervals in the observed CR energy spectrum 5- 1.2.4. Main CR properties and origin of CR in the interval 1 7- 1.2.5. The anisotropy in energy intervals 1 and 2 7- 1.2.6. Relationships between the observed CR spectrum, the anisotropy, the relative content of the - daughter nuclei, and the transport scattering path 9- 1.2.7. Chemical composition in the range and the- expected dependence of and on 11- 1.2.8. Chemical composition in the energy range- and the nature of the scattering elements in the Galaxy 11- 1.2.9. The nature of the energy boundary between intervals 3 and 2 12- 1.2.10. The mode of the dependence of L on particle rigidity R from solar modulation data - of protons, electrons, and nuclei with various Z 13- 1.2.11. The dependence of L on from data of solar CR propagation 15- 1.2.12. The features of the solar modulation of the CR spectrum and the measurements - of the radial gradient 16- 1.2.13. The nature of the CR in energy intervals 3 - 5 16- 1.3. Nuclear interactions of CR with space plasma matter 16- 1.3.1. Cross sections, paths for absorption, and life time of CR particles relative to nuclear - interactions in space plasma 16- 1.3.2. CR fragmentation in space plasma 17- 1.3.3. Expected fluxes of secondary electrons, positrons, g - quanta, and neutrinos 19- 1.3.4. Expected fluxes of secondary protons and antiprotons 22- 1.4. CR absorption by solid state matter (stars, planets, asteroids, meteorites, - dust) and secondary CR albedo 22- 1.5. CR interactions with electrons of space plasma and ionization losses 23- 1.5.1. Ionization energy losses by CR nuclei during propagation in the space 23- 1.5.2. Ionization and

bremsstrahlung losses for CR electrons 25- 1.6. CR interactions with photons in space 26... EAN/ISBN :
9781402051012 Publisher(s): Springer Netherlands Format: ePub/PDF Author(s): Dorman, Lev
