

# Se Nuke X - Seo Automatic Marketing Software

[DOWNLOAD HERE](#)

What is senukex Senukex is one of the most advanced link building tools ever developed in the internet marketing field. It is the version 2 of the hugely popular senuke tool. It is developed by Areeb Bajwa and Joe Russel. Senuke helps You to create web2.0 accounts, create forum profiles, create bookmarking accounts and bookmark urls, do keyword research and more. Lets see everything in detail very soon in this senukex review. Ready fully to have a through understanding of senukex. More about senukex

Senuke was so successful that every programmer out there wanted to create a similar tool and they all tried very hard. But they all failed unfortunately. Such was the dedication of the senuke team that no one else could come close to developing a similar tool with such efficiency. But the developers were not satisfied. They wanted to improve the tool to an extent which was considered impossible. In spite of all the great features senuke had its bugs. They decided to rewrite the whole software and decided to make the entire promotion process automatic, and senukex was born :) With the previous version though everything was automatic one has to wait for each part to be finished to start the rest. For example if You are doing web2.0 properties You have to wait for it to finish so that You can bookmark it. This involved some babysitting and senukex developers wanted to eliminate this. This was done successfully with senukex and with senukex everything is 100 automated. Features of senukex

1. Much better looking and more organised. The previous version was poorly designed when compared to the new design. Its widely accepted that senukex has one of the coolest user interface around. Enterprise developers must make a note of this:)
2. New custom profile module: With the new profile module one can add whatever site he wishes to and senuke will create links in it:) This helps in getting links from unique places and will go a long way in getting You link from places that arent spammed to death. With the previous version everyone were getting links from the default list of sites and the it was not very uncommon to find these site owners closing registration and implementing strict measures to counter link creation.
3. Scheduling: The most demanded feature by senuke users was scheduling as it will ensure that there is no babysitting involved when one has to use senuke. The new feature is so powerful that You can setup projects for an entire month in one go and carry on with Your other work. Senukex will take care of all the things. It is as

cool as it gets. 4.Runs minimised: With the previous version it was not possible to minimise senuke and this made things very difficult for people who used senuke from their home computer. It was difficult to operate other programs when senuke was running. This was taken into account and it was made possible to minimise senuke. 5.Press release module: With this module You can submit press releases.As You know press releases are very powerful method to get few hundred links quickly and senukex will help You get them and fast. 6.Better url manager, better project manager and more: Everything has been done to ensure that Its is easy and a joy to operate.
