Mixing plaids with stripes...is one rocking outfit. 13 MP3 Songs METAL: Alternative Metal, ROCK: Hard Rock Details: Formed in the summer of 99, an 8 month process of writing ensued and the result was gratifying to say the least. The hooplah surrounding their rehearsals slowly grew into what was to become a steadily growing and loyal fanbase. Having drew over 200 people to their first gig, crackjaw quickly began laying the groundwork for a bright music career. Drawing on many influences, as well as their own unique songwriting style, have allowed them to grab the attention of fans from many genres. The recording of Stiff started in early 2001 and continued through winter. Released in July of 2001, Stiff has been well recieved by fans and critics alike. Ryan Bartek of Real Detroit writes: "In rock's modern-day climate, there are only two sure ways to pull of a dramatic success. You can either do something so radically different that it garners the attention of promoters and fans alike, or you can join the pack that's slowly suffocating itself and attempt to out do them at their own game. crackjaw is one of those bands that has made the choice to walk the latter, successfully making their mark with a disc that stands high above many of their nu-metal contemporaries. crackjaw's sound is aggressive to it's core, showcasing the bands ability to assault the listener with pulsating blasts of sonic fury." Having put in over 100 shows in three states (and counting!), they have no plans of stopping until their goals are met. Look for them at a venue near you! Their recent two song industry demo has been eating up bandwidth lately, so be sure to check out their Mp3page: mp3.com/crackjaw If you listened...we thank you! If you purchased...we really thank you! If you listened, but did not purchase...we thank you anyways! Ian, Sean, Penguin, Rian, Dave...crackjaw.
