"Discover The Easy Way To Create Your Own Unique Software Without Having To Write A Single Line Of Code Yourself..." People love to buy software. And, if you create your own, you can easily start selling it to create a new income stream. However, the usual way to create software is a slow, very expensive and extremely technical process. But - I discovered a much easier and quicker way to create software that can work for you even if you're not the least bit technical - and - importantly you can use this tactic to get high quality software created very inexpensively. I've kept this powerful technique to myself -- until now... How To Create Great Software In 7 Days Or Less To create my own unique software, I had to hire a programmer... Now, I'd hired programmers in the past - but - there'd always been problems. Either the bids for the work had been too expensive, or the finished product just wasn't that great. However, that changed when I discovered a little known site that easily helped me find a great and very inexpensive programmer... The software he created for me in just a few days works absolutely great and has since been sold many hundreds, if not thousands of times (and it only cost me $125 to have made). Now, even if you've never dealt with programmers before, and don't consider yourself the least bit technical, I'll show you exactly how I did it step by step, so you can too... These powerful yet very easy-to-follow software creation tactics come in the form of eight brand new videos you view directly at your computer. I've bundled these powerful videos into a product called Instant Software Products: These eight videos come to a total playing time of 92 minutes. Here's a quick run down of exactly what you get:

-- Video One (12 Minutes) In this video I'll show you exactly the software I had created with just a $125 investment which has since been sold thousands of times! -- Video Two (10 Minutes) Here I'll talk you through my private software creation process which I've never revealed before. -- Video Three (5 Minutes) In this video I'll reveal the quick and easy tactic I use for coming up with great software ideas. -- Video Four (10 Minutes) Here I'll talk you through what you need to know to choose the right programmer for your project, and how to make sure they get the project done on time, on budget, and to the highest quality. -- Video Five (10 Minutes) In this video I'll talk you through an often overlooked, but absolutely vital step in the software creation process. -- Video Six (16 Minutes) Here I'll show you exactly how I take the code the programmer creates and turn it into software I can successfully sell. -- Video Seven (13 Minutes) In this video I'll show you an easy way to add passwords to your software and offer your customers "advanced features" for an extra fee. -- Video Eight (16 Minutes) Here I talk you through an exact and detailed step by step demonstration of taking software code and turning it into something you can successfully sell ... you'll see exactly how I do this for my own software and how easy the process is if you know how. -- For PC's Only - Not For Mac I must tell you that this eBook only works (to my knowledge) on PC's. If your computer is running Microsoft Windows, you won't have any trouble at all viewing this eBook successfully. However, if you're on a Mac you'll more than likely have trouble viewing it.
