Iutam Symposium On Computational Methods In Contact Mechanics

DOWNLOAD HERE

Preface; Multigrid Methods for Unilateral Contact Problems with Friction, by Frederic Lebon, Michel Raous and Julian Rosu; Contact Dynamics with Lagrange Multipliers, by Stephan Brunfien, Stefan Heber and Barbara Wohlmuth; Some Advances in Mathematical Programming Method for Numerical Simulation of Contact Problems, by H.W. Zhang, A.H. Liao, Z Q. Xie, B.S. Chen and H. Wang; Finite Element Analysis of Nonsmooth Frictional Contact, by Anna Pandolfi and Michael Ortiz; Energy-Momentum Conserving Schemes for Frictionless Dynamic Contact Problems. Part I: NTS Method, by Peter Betsch and Christian Hesch; Symmetrization of Various Friction Models Based on an Augmented Lagrangian Approach, by Alexander Konyukhov and Karl Schweizerhof; Adaptive BEM for Contact Problems with Friction, by Alexey Chernov and Ernst P. Stephan; Recent Extensions of Mortar-Based Contact Formulations: Lubrication Modeling and Parallel Implementations, by Tod A. Laursen, Eui Joong Kim and Bin Yang; A Coupled Contact and Decohesion Analysis of Laminated Beams, by Alberto Carpinteri, Marco Paggi and Giorgio Zavarise; Smooth Frictional Contact between Beams in 3D, by Przemyslaw Litewka; Nonlinear Boundary Problems for a Cylinder, by Alexander Shermenev; Evolution from the Hertzian Contact Model to Non-Hertzian Conditions for Fast Dynamic Simulations, by Hugues Chollet, Michel Sebes and Jean Bernard Ayasse; A Fully Implicit Approach for the Numerical Treatment of Tractive Rolling, by M. Ziefle and U. Nackenhorst; A Study on 3D Contact of Rough Surfaces Considering Finite Elastoplasticity, by Alex Alves Bandeira, Paulo M. Pimenta and Peter Wriggers; Frictional Contact for Pile Installation, by Daichao Sheng; The Influence of Contact Pressure on the Dynamic Friction Coefficient in Cylindrical Rubber-Metal Contact Geometries, by M.A. Jimenez, J.M. Bielsa, R. Rodriguez and S. Dobn; Modular Modelling of Dynamic Systems with Elastomer Contacts, by M. Kroger, P. Moldenhauer and G. Gbel; Two HIM Approaches for the Prediction and Quantification of "Stick-Slip" Phenomena on Rubber-Metal Sliding Contacts, by J.M. Bielsa, C. Bernad, R. Rodriguez and M.A. Jimenez; Contact Mechanics of Wearing out Solids, by Alfred Zmitrowicz; Modelling of Grain Boundaries Contact in Metals, by N.M. Vlasov and I.I. Fedik; Segregation of Particulate Material Using the Discrete

Element Method, by Hashem Alkhaldi and Peter Eberhard; Unilateral Contact and Damage Analysis in Masonry Arches, by M. Campo, G.A. Drosopoulos, J.R. Fernndez and G.E. Stavroulakis; Discontinuous Numerical Analysis of Masonry Vaults, by R. Bravo and J.L Perez-Aparicio; Author Index; Subject Index. EAN/ISBN : 9781402064050 Publisher(s): Springer Netherlands Format: ePub/PDF Author(s): Wriggers, Peter - Nackenhorst, Udo
