Msagent Javascript Editor

MsAgent Javascript Editor Add Character To Your Web Site! MsAgent is a piece of Microsoft Windows technology that has lay dormant for many years. While some applications have used it, most web functions have never really been explored. We would like to "awaken the beast" so to speak, by introducing you to MsAgent Javascript Editor (MJE). MJE is a point and click interface that allows you to automatically create javascript routines that will use MsAgent functions to bring your web site to life! Each Agent can talk to your visitors, direct them to the important areas on your site and help you promote a certain product or service you offer. Many people are not even aware that MsAgent is included with the Windows operating system. The default character of Merlin, is the only one included, but there are 100s more available for download. With MJE, webmasters can easily enhance their Web pages with interactive personalities in the form of animated characters. These characters can move freely around the computer display, speak aloud (and by displaying text onscreen), gesture, wink, wave and be animated in many other ways to help get your message out. The interface makes this very easy to create javascripts that can be used on your web site. It will actually embed the scripts for you automatically. The buttons on the screen are clear and simple. SHOW: This will make your Agent appear on the screen. HIDE: This makes the Agent go away. SHOW FAST: Agent appears instantly HIDE FAST: Agent goes away instantly MOVE: You can click on the Character and move him any where on the screen and click the Move button. You also can enter the X & Y coordinates. PLAY: Each Agent has its own set of animations it can play. Like doing Magic, or Announce, or Read, etc. SPEAK: Whatever you have in the text box above, will

be spoken by your Agent. THINK: Whatever you have in the text box will appear in a balloon (like speak) but only words are shown. WHISPER: Same as Speak but in a muffled voice. SIZE: You can enter a certain size or percentage for both width and height of the character. TEST SCRIPT: Opens a browser so you can see what you script will look like. CLEAR SCRIPT: Removes all commands from the script below. EMBED SCRIPT: Will create all the javascript routines needed and actually insert them into an existing file. CLIPBOARD: Same as Embed, but only copies the created routines to the clipboard, so you can manually place it where you want in your files. SAVE SCRIPT: Saves the current list of commands as a MJE script. WebMasters will be amazed at the response they will get from users! These characters can take an ordinary webpage and bring it to life with just a few simple lines. Show visitors what is important on your site. Direct them where to go to find additional information about a certain product or service. Greet them and ask them to sign up for your newsletter or download your latest software creation. Tell them What to buy and How to do it! The uses for MsAgent technology is endless. MsAgent Javascript Editor requires one of the following operating systems: Microsoft Windows 98/Me/NT4/2000/XP MsAgent Javascript Editor is not compatible with MAC, Linux, or any other non-Microsoft operating system.
