

Primate Communities

[DOWNLOAD HERE](#)

Comprehensive and unique volume exploring the differences and similarities between primate communities worldwide. Although the behaviour and ecology of primates have been more thoroughly studied than that of any other group of mammals, there have been very few attempts to compare the communities of living primates found in different parts of the world. In *Primate Communities*, an international group of experts compares the composition, behaviour and ecology of primate communities in Africa, Asia, Madagascar and South America. They examine the factors underlying the similarities and differences between these communities, including their phylogenetic history, climate, rainfall, soil type, forest composition, competition with other vertebrates and human activities. As it brings together information about primate communities from around the world for the very first time, it will quickly become an important source book for researchers in anthropology, ecology and conservation, and a readable and informative text for undergraduate and graduate students studying primate ecology, primate conservation or primate behaviour. EAN/ISBN : 9780511035043 Publisher(s): Cambridge University Press Format: ePub/PDF Author(s): Fleagle, J. G. - Janson, Charles - Reed, Kaye
