

Human Herpesviruses

[DOWNLOAD HERE](#)

This is a definitive and comprehensive account of the human herpes viruses. This comprehensive account of the human herpesviruses provides an encyclopedic overview of their basic virology and clinical manifestations. This group of viruses includes human simplex type 1 and 2, Epstein-Barr virus, Kaposi's Sarcoma-associated herpesvirus, cytomegalovirus, HHV6A, 6B and 7, and varicella-zoster virus. The viral diseases and cancers they cause are significant and often recurrent. Their prevalence in the developed world accounts for a major burden of disease, and as a result there is a great deal of research into the pathophysiology of infection and immunobiology. Another important area covered within this volume concerns antiviral therapy and the development of vaccines. All these aspects are covered in depth, both scientifically and in terms of clinical guidelines for patient care. The text is illustrated generously throughout and is fully referenced to the latest research and developments. EAN/ISBN : 9780511286896 Publisher(s): Cambridge University Press Format: ePub/PDF Author(s): Arvin, Ann - Campadelli-Fiume, Gabriella - Mocarski, Edward
