Body Mass Index or Body Mass Indicator is a diagnostic method which helps identify possible weight problems in adults. This index was developed by a Belgian statistician named Adolphe Quelet and was also known as the Quetelet index. This measure of body fatness can be used as a guideline but a physicians advice should also be taken before taking any extreme measure. Obesity can lead to a lot of health related ailments like diabetes, hypertension and other stress related illnesses if not tackled in time.
