BUGGY GAME (PC GAME) BuggyGame is a single-player side-scrolling survival-exploration game where a moon buggy is driven across the surface of Earth and Moon. The story goes that you're an astronaut about to explore the moon, but your buggy just bluescreened (apparently, it was written using the Evil Empire's code). You must now manually navigate your frail buggy to your rocket to win. System Requirements: Windows 98, 2000, ME, NT, XP, Vista & 7
