

Create A Screen Capture Video Within Firefox (with Plr)

[DOWNLOAD HERE](#)

No Restriction Private Label Rights Included With This Video - AVI Files Included! A free PC screen capture software called "CamStudio". Yes, you can actually download "Camstudio" free. Camstudio is very easy to use. However, everybody isn't downloading the free Camstudio software. Well, that's because after downloading the free Camstudio software I realized that it has two major flaws: 1. The output flash videos don't work in the Firefox or Netscape - Now that's a huge problem because so far, Firefox has had over 200 million downloads. Think about it, that's over 200 million people that would not be able to view your video tutorial if you download Camstudio free. Instead of increasing your bottom line, you would be decreasing your bottom line. 2. There is no "Redirect to URL" feature - Why is this such a major problem with the free camstudio download? Well, the "Redirect to URL" feature will redirect the viewer of your PC screen capture video to the URL of your choice at the end of the video. For example, let's say you recorded a video tutorial on a weight loss product that you found on ClickBank.com, you can then redirect the viewer through your affiliate link so they can immediately buy. This will definitely increase your conversion rate.
