is a highly-adjustable, semi-automated, real-time audio manipulation system which allows you to alter your music in a variety of different ways ranging from quite subtle to extremely bizarre. At its heart is a sequencer which synchronizes to the host tempo and slices the incoming audio into user-defined patterns, applying a random selection of DSP effects to each slice. Features: * Realtime, zero-latency VST plug-in effect. * 32-bit internal precision. * 9 fully adjustable DSP effect modules. * Resonant filter on every effect with low pass, high pass, band pass and band stop modes. * Stereo panning, dry/wet mix and volume controls for every effect. * 64-step effects sequencer with 16 custom pattern banks. * Almost every parameter can be automated. * Most main parameters can be controlled via MIDI.
