If you like melodic synthesizer music with TD-like sequences and evocative timbres, then this is the CD you've been waiting for. 11 MP3 Songs ELECTRONIC: Soundscapes, NEW AGE: Space Show all album songs: Looking Forward Songs Details: Zon Vern Pyles is a former Moog Music employee known for programming synthesizer patches for the Minimoog Voyager, Alesis Andromeda, Clavia Nord Lead 3, Nord Modular and several other synthesizers throughout the years. His 30+ years of experience as a synthesist brings you Looking Forward an instrumental solo album of synthesizer music that showcases how beautiful synthesizers can sound. Not strictly relying upon drum machines, the rhythmic elements of Looking Forward hearken back to the days when Tangerine Dream-like sequencer patterns were layered upon one another to create a mandala for the ears. Melody is not forgotten here as the layered sequences create a beautiful landscape of mood for the melody to explore and become even more memorable. Taking the Vangelis approach, several of these tracks were played live in the studio as Zon controlled and played several synthesizers simultaneously to leave room for improvisation while allowing the Muse to strike at any moment. This is synthesizer music at its finest. Like one listener commented, I didnt know synthesizers could sound like that. Enjoy the journey that Looking Forward takes you on!
