

Mp3 Head Chemists - Bittersweet Melody

[DOWNLOAD HERE](#)

Eclectic acoustic- electronic melodious sing alongs 17 MP3 Songs POP: Beatles-pop, ELECTRONIC: Pop Crossover Details: Head Chemists are two creative students who use music and technology to share their thoughts with the world. Chem Pop is what they label their unique fusion of acoustic and electronic styles, which brings traditional instruments together with intriguing synthesizer soundscapes and perfectly programmed drums beats. Head Chemists understand the power of compelling music to carry positive messages through conscious and insightful lyrical content. The Head Chemist duo uses Propellerhead's Reason and Digidesign's Protools software to record and produce their songs. Innovative use of technology is a key ingredient in the band's chemistry. Head Chemists formed in London, England in 2003 when John David Parsons and BenJamin James Prichard met while studying abroad. They continue to play and write new songs while attending Elon University. In August of 2004, producer and engineer John Loy sensed the potential of this new style and joined the Head Chemists project bringing fresh energy and an experienced professional ear to the band while recording their debut album. Head Chemists' debut album/ movie sound track, "Bittersweet Melody" follows a fresh production concept by being a mixture of opposing elements. Musically, Head Chemists bring seemingly unrelated sounds and instruments together to create their unique "Chem Pop" sound. The music of Head Chemists employs many techniques, from blending acoustic guitar and vocals with sweeping synthesizers to sampling JFK speeches and making him 'rap' to the backing of bagpipe-ridden hip-hop beats. The hour-long, 17 track, "Bittersweet Melody" tells the story of a day in the life of a Head Chemist. "Bittersweet Melody" plus fifty other songs were written by John David and BenJamin James in 15 months. The album was then recorded in 72 hours at Nightsound Studios in Chapel Hill, NC over a three-month period. The album was mixed and mastered at Elon University's Audio Lab. What is being called their "freshman album" is the

first installment of a four-album box set as they chronicle their growth as musicians. The 'sophomore' album is already well underway. Fans can go on the [headchemistswebsite](#) and hear previews of Head Chemists' latest work.
