

Spectroscopy Of Semiconductors, The. Semiconductors And Semimetals: Volume 36.

[DOWNLOAD HERE](#)

Spectroscopic techniques are among the most powerful characterization methods used to study semiconductors. This volume presents reviews of a number of major spectroscopic techniques used to investigate bulk and artificially structured semiconductors including: photoluminescence, photo-reflectance, inelastic light scattering, magneto-optics, ultrafast work, piezo-spectroscopy methods, and spectroscopy at extremely low temperatures and high magnetic fields. Emphasis is given to major semiconductor systems, and artificially structured materials such as GaAs, InSb, Hg_{1-x}Cd_xTe and MBE grown structures based upon GaAs/AlGaAs materials. Both the spectroscopic novice and the expert will benefit from the descriptions and discussions of the methods, principles, and applications relevant to today's semiconductor structures. EAN/ISBN : 9780080864334 Publisher(s): Elsevier Science & Technology, Academic Press Format: ePub/PDF Author(s): Seiler, Eicke R. David G. - Littler C. L. - Willardson Robert K.
