

Crystallization Modalities In Polymer Melt Processing

[DOWNLOAD HERE](#)

Introduction.- Interaction of three transport phenomena: heat transfer, flow and crystallization kinetics; Available theories describing the crystallization process; Examples for special cases; Crystallization in confined volumina; Behaviour of confined samples; Influence of strong temperature gradients.- Kinetics and structure formation in unloaded quiescent melts; Introductory remarks; Empirical techniques; Theoretical considerations; Winter's gel point.- Flow induced processes causing oriented crystallization; Preamble; Some comments of considerable reach; Survey of activities in the field of flow induced crystallization; Duct flow experiments; Flow induced small-sized ("point-like") nuclei; Relaxation phenomena; Uninterrupted flow treatments. Closing remarks. EAN/ISBN : 9783211876275 Publisher(s): Springer, Wien Discussed keywords: Polymere Format: ePub/PDF Author(s): Janeschitz-Kriegl, Hermann
