1. Transport Detected Conduction Electron Spin Resonance and g-Factor Anisotropy in a GaAs/AlGaAs Parabolic Quantum Well in the Quantum Hall Regime.- 2. Electron Spin Manipulation in Quantum Dot Systems.- 3. Resistively Detected NMR in GaAs/AlGaAs.- 4. Optical Control of Electron Spins in Quantum Dots.- 5. Single Electron Spin Measurements in Si-Based Semiconductor NanoStructures.- 6. Si/SiGe Quantum Devices, Quantum Wells, and Electron Spin Coherence.- 7. Electrical Detection of Electron Spin Resonance in Two-dimensional Systems.- 8. Quantitative Treatment of Decoherence.- 9. Measuring the Charge and Spin States of Electrons on Individual Dopant Atoms in Silicon.- 10. Electron Spin as a Spectrometer of Nuclear Spin Noise and Other Fluctuations.- 11. A Robust and Fast Method to Compute Shallow States without Adjustable Parameters: Simulations for a Silicon-Based Qubit.- 12. Photon Assisted Tunneling in Quantum Dots. EAN/ISBN : 9783540793656 Publisher(s): Springer, Berlin Format: ePub/PDF Author(s): Fanciulli, Marco
