

Minimal Surfaces Of Codimension One. North-holland Mathematics Studies, Volume 91.

[DOWNLOAD HERE](#)

This book gives a unified presentation of different mathematical tools used to solve classical problems like Plateau's problem, Bernstein's problem, Dirichlet's problem for the Minimal Surface Equation and the Capillary problem. The fundamental idea is a quite elementary geometrical definition of codimension one surfaces. The isoperimetric property of the Euclidean balls, together with the modern theory of partial differential equations are used to solve the 19th Hilbert problem. Also included is a modern mathematical treatment of capillary problems. EAN/ISBN : 9780080872025 Publisher(s): Elsevier Science & Technology, North Holland Format: ePub/PDF Author(s): Massari, Mario Umberto - Miranda
