Scaleup is becoming more important as the human population grows. Major problems will be material scarcities, especially potable water and food. To meet these growing problems, processes need to be scaled up and become more efficient. Old methods, technology, science, engineering and design need to be replaced by newer versions. Hence, there is a need to rethink scaleup methods as well. This book is a comprehensive and highly practical source that shows the reader how to solve various types of scaleup problems in the process industries. The text is readable for both the business person and the engineer.
