

# Mp3 R.d.jansen - Fog Signals On Cd

[DOWNLOAD HERE](#)

Repeatable sound signals, a safety item for boaters with a CD player and deck speakers. 23 MP3 Songs  
ELECTRONIC: Experimental, ELECTRONIC: Industrial Details: Product type: Specialty safety item for boaters of all kinds. Boaters caught in the fog or rain or snow are required to make periodic sound signals, ("fog signals"), to alert other boats in the area of their location and status. Small CO2 air-horn cans run out in less than one hour of periodic signaling, a duty which is stressful in itself. VHF radio cannot warn boats moving in the vicinity who have no radio, or, often, have it turned off, This new product provides a neat solution. Many boats have a good, loud stereo system with speakers on deck. Other boaters bring a "boombox" along. All CD players can be set to repeat a single track over and over. The boater simply sets the CD player to repeat the desired signal track and cranks up the volume. Horn and bell signals repeat, depending on which is used, every 30 seconds to two minutes, continuously, without further effort and with no expense. Twenty official signals are included, from "Under power, making way" to "Aground", to "Sailing (in fog)". The no-refill concept is especially appealing to anyone who has ever run out of Co2 in the fog.
