

Modelling, Simulation And Software Concepts For Scientific-technological Problems

[DOWNLOAD HERE](#)

Martensitic Phase Transformations of Mono and Polycrystalline Shape- Memory Alloys A Theoretically and Numerically Unified Concept.- Thermo-Hydro-Mechanical Modeling of Coupled Processes in Clay-Materials.- Multibody Contact Algorithms for Fracturing Solids.- New Strategies in Finite Element Analysis of Material Processing.- Computational Techniques for Multiscale Analysis of Materials and- Interfaces.- Numerical Modelling and Simulation of Atomic Force Microscopes.- Finite Element and Boundary Element Approaches to Transmission and- Contact Problems in Elasticity.- Efficient Solvers for Mixed Finite Element Discretization of Nonlinear- Problems in Solid Mechanics.- Computational Differential Geometry Contributions of the Welfenlab- to GRK 615.- Analysis of a Mathematical Model Describing Necrotic Tumor Growth. EAN/ISBN : 9783642204906 Publisher(s): Springer, Berlin Format: ePub/PDF Author(s): Stephan, Ernst - Wriggers, Peter
