

# Getdataback Portable Reseller Rights

[DOWNLOAD HERE](#)

GetDataBack will recover your data if the hard drives partition table, boot record, FAT/MFT or root directory are lost or damaged, data was lost due to a virus attack, the drive was formatted, fdisk has been run, a power failure has caused a system crash, files were lost due to a software failure, files were accidentally deleted. GetDataBack can even recover your data when the drive is no longer recognized by Windows. It can likewise be used even if all directory information - not just the root directory- is missing.
