Pop-up advertising used to be an excellent way for you to collect email addresses, gain new subscribers, promote affiliate programs, offer free reports... And the list goes on. But with the birth of pop up blocking technology so comes the death of pop up advertising. Due to the abuse and misuse of pop up advertising by millions of irresponsible website owners pop up blocking software is now in high demand. As a matter of fact... The following online giants now give away FREE software that automatically blocks your pop-up

ads... Google offers its 300 million monthly surfers a toolbar that automatically blocks your pop-up ads. Alexa offers its 10 Million users a free toolbar that automatically kills your pop-ups. I like the way once you generate it, that it will add it to your html page, and you don't even have to edit your page. Just hit the button then load your html page to your server. Your software makes it easy...Wow! Teresa King Tipsfortop Now, if you are wondering... "What exactly is a 'Float-In Window' and why can't it be blocked like the old style pop-up windows?"... Well first let me explain how pop-ups work and how they are easily blocked. A Pop-Up window works by instantly opening a completely separate "new browser window" that pops into view whenever someone enters or exits you website. Pop-Up Blockers work by automatically stopping any and all webpages that are programmed to open in a separate "new browser window". Thus when a visitor running any kind of pop-up blocking software lands on your page the pop-up window is blocked automatically and your advertisement- is never seen. Next, lets examine the attention grabbing power of "Float-In Windows" and why they cannot be blocked, killed or destroyed. "Float-In Windows" are simply a part of your web page and Dont require a new browser window to be opened. Although they appear to be a seperate window they are actually a part of the same web page that they gracefully Float-In to. "Float-In Windows" Dont require a New Browser Window to be opened therefore they CANNOT be blocked, killed, or destroyed.

----- SIDE NOTE:----- Float In Windows Stay In View Even If The Visitor Scrolls Down The Page.
