

# Green's Functions And Ordered Exponentials

[DOWNLOAD HERE](#)

A detailed exposition, with applications to problems in potential theory and quantum field theory. This book presents a functional approach to the construction, use and approximation of Green's functions and their associated ordered exponentials. After a brief historical introduction, the author discusses new solutions to problems involving particle production in crossed laser fields and non-constant electric fields.

Applications to problems in potential theory and quantum field theory are covered, along with approximations for the treatment of color fluctuations in high-energy QCD scattering, and a model for summing classes of eikonal graphs in high-energy scattering problems. The book also presents a variant of the Fradkin representation which suggests a new non-perturbative approximation scheme, and provides a qualitative measure of the error involved in each such approximation. Covering the basics as well as more advanced applications, this book is suitable for graduate students and researchers in a wide range of fields, including quantum field theory, fluid dynamics and applied mathematics. EAN/ISBN : 9780511037498 Publisher(s): Cambridge University Press Format: ePub/PDF Author(s): Fried, H. M.
