[DOWNLOAD HERE](#)

This sound effect is a stereo recording recorded in the galley of an English canal boat. You can clearly hear the quiet chug of the diesel engine, which changes tone halfway through as the boat accelerates. Also see our other canal boat recordings of passing through a tunnel and an external shot from the front of the boat. All files on sale by Sevenleaf SFX have been recorded by professionals and as such are royalty free. They are available for you to download as 16 bit 48kHz stereo wav files.
