

Iutam Symposium On Mechanical Behavior And Micro-mechanics Of Nanostructured Materials

[DOWNLOAD HERE](#)

Preface; - Part 1: Mechanical Behaviors of Nanocrystal Materials:- Mesoscopic Modeling of the Deformation and Fracture of Nanocrystalline Metals, by Lallit Anand and Yujie Wei; Dislocation-Assisted Grain Growth in Nanocrystalline Copper under Large Deformation, by X.L. Ma, H.T Wang and W Yang; - Microstructure and Tensile Strength of Cu with Nano-Scale Twins, by YE Shen, X.H. Chen, B. Wu and L. Lu; Microstructural Evolution in Crystalline Metal Induced by Plastic Deformation, by A. Nakatani and T Shimokawa; - Part 2: Super-Strength and Ductility of Nano-Thin Films: - The Origin of Superhardness in Nanocomposite Coatings: Analysis of Nanoindentation and Scratch Tests, by Chunsheng Lu, Yiu-Wing Mai and Yao-Gen Shen; Micromechanics of Nanocomposites with Interface Energy Effect, by Z.P. Huang and J. Wang; Measurements and Simulations of Interface Behavior in Metal Thin Film Peeling Along Ceramic Substrate, by Yueguang Wei, Hatfeng Zhao and Siqi Shu; Micro-Cantilevers for Thin Films: Young s Modulus, by G.J. McShane, M. Boutchich, S. Phani, D.F Moore and TJ. Lu; - Part 3: Nanomechanics of Biomaterials: - Bio-Inspired Mechanics of Bone-Like Hierarchical Materials, by Huajian Gao; Force Unfolding Single RNAs: From Equilibrium to Far-From Equilibrium, by Fei Liu, Huan Tong and Zhong-Can Ou-Yang; Modelling the Thermal Conductivity of Nanofluids, by P. Tillman and J.M. Hill; - Part 4: Mechanical Behaviors of Carbon: - Nano-Tube, Nano-Wire, Nano-Layers A Comparison of Different Interatomic Potentials: Radius Effect of Single Wall Carbon Nanotubes, by H. Jiang, Y Huang and K. C. Hwang; Shape Memory Effect and Pseudoelasticity in Cu Nanowires, by Wuwei Liang and Min Zhou; Instabilities of Carbon Nanotubes Studied Using a Hybrid Atom/Continuum Approach, by L.-F Wang and Q.-S. Zheng; Shallow and Deep Nanoindentation on W/NbN Nanolayers, by S.X. Mao, B.M. Ennis and YG. Wei;- Part 5: Micro-Mechanics Models and Simulations for the Nanostructured Materials: - Cluster Statistical Thermodynamics (CST) To Efficiently Calculate Quasi- Static Deformation at Finite Temperature Based on Molecular Potential, by Ming Hu, Haiying Wang, Mengfen Xia, Fujiu Ke and Yilong Bai; On the Size of the Representative Volume Element for Isotropic Elastic Polycrystalline Copper, by F El Houdaigui, S. Forest, A. F. Gourgue and D. Jeulin; Atomistic Corroboration of a

Multiscale Approach for the Analysis of Dislocation Nucleation at a Surface Step, by G. Xu, D.E. Segall and C. Li; Indenter Tip Radius and Micro-Indentation Hardness, by C.J. Tao, TC. Wang, X.Y Feng and S.H. Chen; - Part 6: Mechanical Behaviors of Other Nano-Materials: - The Phase Angle of an Interface Crack Induced by Indentation Delamination with Buckling, by Tong-Yi Zhang, Bin Huang and Ming-Hao Zhao; Microscopic Shape Memory and Superelastic Effects and Their Novel Tribological Applications, by Yang-Tse Cheng, Wangyang Ni, Yijun Zhang and David S. Grummon; Dynamics of Self-Organized Epitaxial Island Formation under Controlled Annealing, by Y Ni, A.K Soh and LH. He; Studying Visco-Plasticity of Amorphous Polymers by Indentation Tests, by C.Y Zhang, YW Zhang, K.Y Zeng and L. Shen; Phase Transitions of Carbon Materials under High Pressure, by Wanlin Guo, Yitao Dai and Bin Zhang;- Author Index; Subject Index. EAN/ISBN : 9781402056246 Publisher(s): Springer Netherlands Format: ePub/PDF Author(s): Bai, Y. L. - Zheng, Q. S. - Wei, Y. G.
