The easiest way EVER to create your own business web site... for complete beginners! "Simple step-by-step guide for business owners to take their company to the Web. It's like having your own personal tutor to guide you through building your first business site..." "Easy foolproof video enhanced system for complete beginners to launch a business web site even if you don't know a link from a button!"

" If You Can Type, You Can Make a Web Site. Hi, my name is Milana and I am the owner of the First Business Web Site. If you are completely new to web design, you came to the right place. Most business owners who want to have a web site hire a web designer. They are afraid it is too hard, takes too long to learn, and HTML sounds just like a rocket science. The truth is, if you have worked with a computer before and surfed the 'net for a while, you can build your own web site in a matter of days! I have created a product that is based on a simplified approach for complete beginners. It takes you step by step through the process of making your first web site. From choosing and registering a domain name, adding text, pictures and links, to putting it on the Web. You will NOT need to learn HTML to make your web site! You will NOT have to buy any expensive programs! You will be able to change your web site ANY time you want! "You have my stamp of approval!.. A five star rating"Ricky Higgs"Milana, your ebook is very good, I've printed it out and put it in a 2 ring folder. You've got a pleasing writing style and know your subject well.... I'd recommend it to any one who wanted to build a web site and had absolutely no knowledge on the subject. Full marks ... You have my stamp of approval!.. A five star rating. I am asked to review quite a number of ebooks in my position, as you can appreciate... Yours is one of the best in my opinion for it's target audience.Ricky HiggsAuthor of "Sell Your Brain on the Net" 1website1.com Simple Video Instructions But here is the BEST part: every step of the way is demonstrated through a video clip that any computer can play. Want to know how to make a link? Click on this little camera and play a video, then try doing it yourself. Want to know how to resize a graphic? Play a clip and you will see me do it. Many people who are using this e-book told me, "Milana, it's like having you right next to me by my computer!" As a former music teacher who wouldn't even touch a computer for years, I know what it feels like to be scared of technology. I didn't want to read all the techno-talk. I just wanted someone to SHOW me how to do it. Years later I remembered it. Instead of creating another book on web design, I decided to add videos for a faster and easier learning process. Just look at some of the things you will learn in the video clips: Adding text to your web page and changing its size and colors in seconds! Inserting pictures and links by a click of a button! Making a link so people could e-mail you directly from your web site Saving and viewing your web page in a browser (just the way your visitors will see it!) Enhancing your web page by adding a background Inserting separation lines and a list of items, benefits or features Making a table and adding text and pictures inside it Editing simple HTML code behind your web page Putting your web site online, so everyone in the world could access it Let me just say this: there is a hard

way and an easy way of learning things. Reading a tutorial full of technical jargon and confusing procedures is a hard way. Watching someone else do it right in front of your eyes - IS THE EASY WAY! Click Here for Table of Contents "...absolutely the hands-down best tutorial"Rick Beneteau"I am asked for endorsements almost every day and to date, I've only put my name on a few products. I've read more than my share of how-to books and have been impressed with VERY few. Milana Nastetskaya's "Create Your First Business Web Site in 10 days!" is absolutely the hands-down best tutorial on creating a successful website I've come across.Heck, I've been building websites for 3 years now, and I learned a fewthings:-) Bravo Milana!! Rick BeneteauAuthor of the Top-Selling Ezine Marketing Machineezinemoney Read complete review You will also find out how to reveal design secrets of other web sites and use free images on your pages. If you are a complete novice in starting a web site, then you will greatly benefit from reading about: what steps are involved in putting your business on the Web how to choose and register your own domain name where to find a good hosting company (and what IS a good hosting company...) what 3 tools you will need to make your web site and get it up and running what information should go on your web site If you have very little money to invest into your web site, this is a great product for you! All you will ever have to spend on your web site is the hosting fee (where your web site will be stored). And I am paying just \$5.00 to have this web site.
