Approximation Of Continuously Differentiable Functions. North-holland Mathematics Studies, Volume 130.

[DOWNLOAD HERE](#)

This self-contained book brings together the important results of a rapidly growing area. As a starting point it presents the classic results of the theory. The book covers such results as: the extension of Wells' theorem and Aron's theorem for the fine topology of order m; extension of Bernstein's and Weierstrass' theorems for infinite dimensional Banach spaces; extension of Nachbin's and Whitney's theorem for infinite dimensional Banach spaces; automatic continuity of homomorphisms in algebras of continuously differentiable functions, etc. EAN/ISBN : 9780080872414 Publisher(s): Elsevier Science & Technology, North Holland Format: ePub/PDF Author(s): Llavona, Jose G.
