Glacial dark electronica. 9 MP3 Songs ELECTRONIC: Dance, ELECTRONIC: Industrial Details:

"Approximately six years ago, I discover this duo hailing from the United Kingdom. The originality of their music and their out of the commercial system step were very fresh and seducing at that time. Five years after their very convincing first album "Modified", the style of this DF has not changed radically. It's always this unconventional mix of acoustic instruments (guitars, violins, ...) and a total electronic chaos ("Closed Circuits") with at the top, the haunting and tortured voice of Ami. Nevertheless, the band had the intelligence to avoid the trap of the "Modified 2". So, we can notice some evolutions like the perfect immersion of her voice in the compositions "Euphoric", "What is Me", just like another instrument and not far from the work of Bjork (only the step not the style) and the presence of different (and new) musical sides: a dark ambient one with "Lucid" or a more trip-hop approach "Six Numbers". Restrain this album to the musical content would have been an insult to their creativity... In the cd-rom data part you'll find an interactive video clip with a gloomy and strange atmosphere that ends with the final death of the user and finally three very good tracks on the mp3 format. This is a pleasure to notice that finally some bands keep the fire of the originality burning.." Review of [digital flesh] by Cedric Wattergniaux Sideline Music
