

Model Based Learning And Instruction In Science

[DOWNLOAD HERE](#)

Introduction. 1. Student/Teacher Co-Construction Of Visualizable Models In Large Group Discussion. 2. An Instructional Model Derived From Model Construction And Criticism Theory. 3. Determining Target Models And Effective Learning Pathways For Developing Understanding Of Biological Topics. 4. Co-Construction And Model Evolution In Chemistry. 5. Target Model Sequence And Critical Learning Pathway For An Electricity Curriculum Based On Model Evolution. 6. Case Study Of Model Evolution In Electricity: Learning From Both Observations And Analogies. 7. A Competition Strategy And Other Discussion Modes For Developing Mental Models In Large Group. 8. What If Scenarios For Testing Student Models In Chemistry. 9. Applying Modeling Theory To Curriculum Development: From Electric Circuits To Electromagnetic Fields. 10. Developing Complex Mental Models In Biology Through Model Evolution. 11. Role Of Discrepant Questioning Leading To Model Element Modification. 12. Using Analogies In Science Teaching And Curriculum Design: Some Guidelines. 13. Model Based Reasoning Among Inner City Middle School Students. 14. Six Levels Of Organization For Curriculum Design And Teaching. EAN/ISBN : 9781402064944 Publisher(s): Springer Netherlands Format: ePub/PDF Author(s): Clement, John J. - Rea-Ramirez, Mary Anne
