

Progress In Botany 71

[DOWNLOAD HERE](#)

Review. Leaf morphogenesis in *Streptocarpus*.- Genetics. DNA Replication in Plants. The Importance of Cell Patterning in Plant Development. Fruit Development.- Physiology. Adaptation to a Changing Environment: The Regulatory Role of Small RNAs. Growth Responses to Changing Light Environment. Algae Viruses: A Newly Discovered World. The Role of Auxin in Plant-Microbe Interactions. Molecular Mechanism of Water and Gas Transport Across Biological Membranes and Consequences for Plant Physiology.- Systematics. Reconciling Molecular with Morphological Data - Progress in Lichen Systematics and Phylogeny.- Ecology. Systemic resistance induction mediated by vascular and airborne signalling. The functions of roots. Allometry of tree size and crown shape as a result of internal matter allocation and external mechanical abrasion. Physiological ecology of aspen. Development of forest refuge biocoenoses during glacial times. EAN/ISBN : 9783642021671 Publisher(s): Springer, Berlin
Discussed keywords: Botanik Format: ePub/PDF Author(s): Lttge, Ulrich E. - Beyschlag, Wolfram - Bdel, Burkhard
