

Carbon In The Geobiosphere

[DOWNLOAD HERE](#)

Chapter 1: Brief Overview of Carbon on Earth- 1. An unusual look at Earth's shells- 2. Global carbon cycle- 3. Fundamental equation of a cycle and carbon flows- 4. Carbon in Fossil Fuels- 5. Feedbacks in the carbon cycle- Chapter 2: Earth's Volatile Beginnings- 1. The Major Volatiles- 2. Primordial Atmosphere-Ocean System- 3. Carbon Dioxide- 4. Summary and Speculations- 5. An Early Biosphere - Chapter 3: Heat Balance of the Atmosphere and Carbon Dioxide- 1. Heat Sources at the Earth's Surface- 2. Solar Heating and Radiation Balance- 3. Greenhouse Effect- 4. Temperature of a Prebiotic Atmosphere- 5. CO₂ and Climate Change- Chapter 4: Mineralogy, Chemistry, and Reaction Kinetics of the Major Carbonate Phases- 1. Carbonate Minerals- 2. Calcites- 3. Dolomite- 4. Aragonite- 5. Carbonate Dissolution and Precipitation Kinetics- 6. Carbonate Precipitation and Dissolution in Marine Ecosystems- 7. Some Geological Considerations- Chapter 5: Carbon Dioxide in Natural Waters - 1. Dissolution and Dissociation of CO₂ in Water- 2. CO₂ Transfer from Atmosphere to Water- 3. Calcite and Aragonite in Natural Waters - 4. Degree of Saturation With Respect to Carbonate Minerals - 5. CO₂ Phases: Gas, Liquid, Hydrate, Ice- 6. Air-Sea CO₂ Exchange due to Carbonate and Organic Carbon Formation- Chapter 6: Isotopic Fractionation of Carbon: Inorganic and Biological Processes- 1. Isotopic species and their abundance- 2. Isotopic concentration units and mixing- 3. Fractionation in inorganic systems- 4. Photosynthesis and plant physiological responses to CO₂- 5. Biological fractionation and ¹³C cycle- 6. Long-term trends- Chapter 7: Sedimentary Rock Record and Oceanic and Atmospheric Carbon- 1. Geologic Time Scale and Sedimentary Record- 2. The Beginnings of Sedimentary Cycling- 3. Broad Patterns of Sediment Lithologies- 4. Differential Cycling of the Sedimentary Mass and Carbonates- 5. Sedimentary Carbonate System- 6. Evaporites and Fluid Inclusions- 7. Isotopic Trends- 8. Summary of the Phanerozoic Rock Record in Terms of Ocean Composition- Chapter 8: Weathering and Consumption of CO₂ - 1. Weathering Source: Sedimentary and Crystalline Lithosphere- 2. Dissolution at the Earth's Surface- 3. Mineral-CO₂ Reactions in Weathering- 4. CO₂ Consumption from Mineral-Precipitation Model- 5. CO₂ Consumption from Mineral-Dissolution Model- 6. Environmental Acid Forcing- Chapter 9: Carbon in the Oceanic Coastal Margin- 1. The Global Coastal Zone- 2. Carbon Cycle in the Coastal

Ocean- 3. Inorganic and Organic Carbon- 4. Marine Calcifying Organisms and Ecosystems- 5. Present and Future of Coastal Carbon System- Chapter 10: Natural Global Carbon Cycle through Time- 1. The Hadean to Archaean- 2. The Archaean to Proterozoic- 3. The Phanerozoic- 4. Pleistocene to Holocene Environmental Change - Chapter 11: The Carbon Cycle in the Anthropocene- 1. Characteristics of the Anthropocene- 2. Major Perturbations in the Carbon Cycle: 1850 to the Early 21st Century- 3. Partitioning of Carbon, Nitrogen and Phosphorus Fluxes- 4. The Fundamental Carbon Problem of the Future
EAN/ISBN : 9781402042386 Publisher(s): Springer Netherlands Format: ePub/PDF Author(s): Mackenzie, Fred T. - Lerman, Abraham
