

Metastasis Of Colorectal Cancer

[DOWNLOAD HERE](#)

From the contents: Introduction; N. Beauchemin, J. Huot- 1. The Metastatic Process: an Overview; N.Porquet, S. Guot, J. Huot- 1.1 Models of metastasis- 1.1.1 The progression model- 1.1.2 The transient compartment model- 1.1.3 The early oncogenesis model- 1.1.4 The fusion model- 1.1.5 The gene transfer models- 1.1.6 The genetic predisposition model- 1.2 Metastatic steps- 1.2.1 Development of the primary colorectal cancer - 1.2.1.1 Initiation of the primary neoplasm - 1.2.1.2 Influence of stromal cells - 1.2.1.3 Influence of the extracellular matrix - 1.2.1.4 Epithelial-Mesenchymal transition - 1.2.1.5 Angiogenesis and lymphangiogenesis- 1.2.2 Intravasation- 1.2.3 Circulation of cancer cells- 1.2.4 Extravasation - 1.2.4.1 The adhesion on endothelial cells and the homing concept of metastasis - 1.2.4.2 The passage across the endothelium- 1.2.5 Colonization of the secondary sites- 1.3 Concluding Remarks- References- 2. Physiopathology of Colorectal Metastasis; C. Ferrario, M. Basik- 2.1 Mechanisms of metastatic spread- 2.1.1 Circulatory spread - 2.1.1.1 Lymphatic spread - 2.1.1.2 Hematogenous spread- 2.1.2 Local spread- 2.1.3 Tumour dormancy- 2.2 Sites of metastasis and consequences of spread- 2.2.1 Liver - 2.2.1.1 Steps in liver invasion - 2.2.1.2 Development of liver failure- 2.2.2 Lungs- 2.2.3 Peritoneum- 2.2.4 Bone and bone marrow- 2.2.5 Brain metastasis- 2.3 factors contributing to metastatic spread- 2.3.1 Tumour factors - 2.3.1.1 Tissue Factor - 2.3.1.2 EGFR- 2.3.2 Host factors - 2.3.2.1 Immunity - 2.3.2.2 Diet, exercise and liver disease- 2.3.3 Iatrogenic factors- 2.4 Conclusion- References- 3. The Genetic of Colorectal Cancer; A.M. Kaz, W.M. Grady- 3.1 Introduction- 3.2 The Adenoma-to-Carcinoma Sequence- 3.3 Genomic Instability- 3.3.1 Overview- 3.3.2 Chromosome Instability - 3.3.3 DNA Mismatch Repair Inactivation and Microsatellite Instability- 3.3.4 Base Excision Repair Defects/MYH- 3.4 Common Deregulated Signalling Pathways- 3.4.1 Wntless/Wnt Signalling Pathway - 3.4.1.1 APC - 3.4.1.2 B-Catenin (CTNNB1)- 3.4.2 KRAS, BRAF and RAS-RAF-MAPK Signalling Pathway - 3.4.2.1 K-RAS - 3.4.2.2 BRAF- 3.4.3 p53 (TP53)- 3.4.4 The Phosphatidylinositol 3-kinase (PI3K) Pathway - 3.4.4.1 PIK3CA - 3.4.4.2 PTEN- 3.4.5 TGF-B Signalling Pathways - 3.4.5.1 TGFBR2 - 3.4.5.2 The SMAD Family of Genes - 3.4.5.3 TGF-B Superfamily Receptors: ACVR2 and BMPR1A- 3.5 Genome-Wide Analyses of Colorectal Cancer Genes - 3.6 Metastasis Genes- 3.7

Conclusions- References- 4. Epigenetics of Colorectal Cancer; F.J. Carmona, M. Esteller- 4.1
Introduction - 4.2 DNA methylation defects in colorectal cancer- 4.2.1 Hypomethylation of DNA- 4.3
Inactivation of tumour suppressor genes by CpG island hypermethylation- 4.4 Epigenetic regulation of
microRNA in cancer- 4.5 MicroRNAs as metastasis switches- 4.6 Histone modification defects in colon
cancer- 4.7 Epigenetic contribution to colorectal cancer metastasis- 4.8 Epigenetic biomarkers and
therapies- References- 5. Cancer-initiating Cells in Colorectal Cancer; ... EAN/ISBN : 9789048188338
