American Pop/Rock with a British Flavor. 13 MP3 Songs POP: Today's Top 40, ROCK: Modern Rock Details: the Logic began in the summer of 1998, when founder/front man Chad Austin began a writing unit with the sole purpose of writing songs. After several months- and about 15 songs later, the band realized they wanted to take their songs to the next level and perform live. By May of 1999, the band, calling themselves the Logic, found themselves hitting the stage. Since that time, Logic has armed itself with 4 original CD's, a large following, and an energetic, dancing, ALL-COVER tune show as well. Each CD from the Logic experiments with different ideas, sounds textures... but in a pop-sense. The result is pure ear candy for the listener. the Logic started using technology to enhance their music and add tones that rival the sounds of more established National Acts. This enhancement of performances includes adding drum beats and loops and effects to songs not normally considered dance, thus allowing their performances to cross generation gaps through genres of musical styles.
