You find out that using a basic text editor like Notepad is one of the simple tools that you can use to edit your CGI Scripts. If words like MySQL and CGI bin fill your mind with doubt, those days will soon be over. "Install CGI Scripts" takes you step by step through the various processes of modifying and installing CGI Scripts on your very own. From installing membership scripts, to autoresponders, to ad tracking, once you watch these videos a few time, you'll gain a new found knowledge of what CGI is all about. You will soon have confidence in installing those scripts that you used to have to pay to have installed. These fifteen videos are in easy to use flash format, so you can easily rewind and fast forward to the most important parts again and again. You probably won't be an expert watching them the first time through, but getting a good handle on what CGI is all about is definitely only a mouse click away with these complete videos." George Sepich

createandsellproducts.com Now think about it. If you're not watching these videos, it may take you many months before you can finally learn how to install scripts. (Of course, depending on your present level of skills and knowledge) What I've seen in general is that most newbies have no idea on how to do these technical stuff. I've seen a lot of similar help requests on many marketing forums, every single day. Even with the help of those guys, they can only tell you how to do it on writing but you've still got to figure out

how to do what you've been told! Why spend the next weeks and months trying to figure out all of the steps it takes to get things going online -- when you can watch someone show you exactly how to take action and get your CGI & PHP scripts installed and running today? With these videos, you'll be able to watch them directly from the computer screen itself!
