1;PREFACE;4 2;CONFERENCE BOARD;5 3;ORGANIZING COMMITTEE;5 4;LOCAL ORGANIZING COMMITTEE;6 5;CONFERENCE SECRETARIAT;6 6;CONTENTS;7 7;Plenary Lectures;17 7.1; Management of Water Pollutants Based on Multi-Criteria Analysis and Fuzzy Logics; 17 7.2; Enriched Element Method and Its Applications to Solid Mechanics;31 7.3;Large- Scale Boundary Element Analysis in Solid Mechanics Using Fast Multipole Method;35 8;Semi-plenary Lectures;51 8.1;Optimization and Robustness of Deformable Systems with Randomness;51 8.2;Monotonic and Cyclic Analysis of Granular Soils;75 8.3;Multiresolution Mechanics for Material Design and Manufacturing;103 8.4;Application of Computational Mechanics to Reliability Studies of Electronic Packaging;104 8.5;Topology Optimization of Structures: Applications in the Simulation and Design of Cellular Materials;117 8.6;An Extremely Efficient Finite- Element Model Updating Methodology with Applications to Damage Detection;155 8.7; Dynamic Infinite Elements for Soil- Structure Interaction Analysis in a Layered Soil Medium;169 9;LIST OF OTHER SEMI-PLENARY LECTURES;184 10; Abstracts of regular sessions;185 10.1; Numerical Simulation of Cavitation Generation in Tandem Cascades;185 10.2;Numerical Simulation of Atrium Fire using Two CFD Tools;186 10.3;Investigation of the Particulate Matters with the Aid of CFD;187 10.4;CFD Analysis of Fire in a Forced Ventilated Enclosure;188 10.5; Development of the Diffusion Control System using Air Shutter; 189 10.6; A High Order Compact Difference Scheme for Solving the Unsteady Convection-Diffusion Equation; 190 10.7; Computation of One- Dimensional Dam- Break Flow Using ENO Scheme;191 10.8; Numerical Simulation of 2D Flood Waves Using TVD Scheme;192 10.9; Motion Analysis of the Elevating Ball by the Effect of Buoyant Force; 193 10.10; Development of an Educational Flow Simulation System; 194 10.11; Using Finite Element Program Generator to Solve N-S Equation; 195 10.12; Experimental and CFD Study of the Effects of Design Parameters on Reynolds Number in a Short Duration Hypersonic Test Facility; 196 10.13; Investigation of Multiphase Flows near Walls with Textures by the Lattice Boltzmann Method; 197 10.14; Numerical Simulation of the Microstructure of Magnetorheological Fluids in Magnetic Fields; 198 10.15; Implementation of a 3D Multilaminated Hydromechanical Model for Analysis of an Unlined High Pressure Tunnel;199 10.16; Prediction of Mixing

and Reacting Flow Inside a Combustor;200 10.17;Large Eddy Simulation of Turbulent Reactive Flow;201 10.18;Computational Modeling of Coal Water Slurry Combustion Processes in Industrial Heating Boiler;202 10.19; Large Eddy Simulation of Unsteady Turbulent Flow and Pressure Fluctuation in an Axial-Flow Pump with Various SGS Models;203 10.20;Computation of Turbulent Flows in Natural Gas Pipes with Different Rectifiers; 204 10.21; Computation of Unsteady Incompressible Turbulent Flow by Using an Implicit SMAC Method;205 10.22;Simulation on Vortex Effect for Superconducing Devices;206 10.23;Effect of Surface Traction on the Shakedown Limit under Moving Surface Loads;208 10.24;Elasto -Plastic Finite Element Analysis of Tapered Steel Silo;209 10.25; Numerical Simulation of Failure Process in Heterogeneous Elastoplastic Materials;210 10.26; Fatigue Damage Analysis of Reactor Vessel Model Under Repeated Thermal Loading;211 10.27;Stress Intensity Factor of a Wide Range of Semi-Elliptical Partly Through- Wall Crack in a Finite- Thickness Plate;213 10.28; Numerical Simulation of the Fracture Spacing in Two-Layered Material Subjected to Thermal and Mechanical Loading;214 10.29;VCCM Rule-Based Meshing Algorithm for an Automatic 3D Analysis of Crack Propagation of Mixed Mode;215 10.30; The State- of- the- Art Methodology to Compute the 3- D Stress Intensity Factors for Arbitrary Shaped Cracks in Complex Shaped Structures;216 10.31;3D Crack Propagation Analysis Using Free Mesh Method;217 10.32; Finite Element Method for Analyzing Stress I EAN/ISBN : 9783540482604 Publisher(s): Springer, Berlin Format: ePub/PDF Author(s): Yao, Z. H. - Yuan, M. W.
