

## Digg Linker

[DOWNLOAD HERE](#)

very simple application which will make it a snap for users to create "Digg" links which they can then post on their blog posts, web pages, forum signatures, etc. As you'll soon find out, if you can point your mouse, click a button and type a few words, you will find using Digg Linker a snap as well. Best of all, Digg Linker Web Tool works right out of the box, there is absolutely NO complicated install process needed. Simply download the zip file, unzip and run. We have tried to make it as easy as possible and couldn't have made it any easier.
