

Swift Heavy Ions For Materials Engineering And Nanostructuring

[DOWNLOAD HERE](#)

CH-1: Ion Beams for Materials Engineering an Overview 1.1 Introduction 1.2 Challenges in Materials Science 1.3 Ion Beam Based / Assisted Processes 1.4 Materials Modification with Ion Beams 1.5 Possibilities of tailoring the materials properties with Ion Beams 1.6 Why Ion beams for Materials Engineering? 1.7 Self Organization 1.8 Creation of New Materials and Futuristic Technologies 1.9 References CH-2: Ion Matter Interaction 2.1 Introduction 2.2 Nuclear and Electronic Energy Loss in Materials 2.3 Cooperative Effects of Nuclear and Electronic Energy Losses 2.4 Applications of Low Energy Ion Impact on Solids 2.5 Applications of high energy ion impact on to solids 2.6 Applications of Etched Tracks in Solids 2.7 Simulation efforts to understand ion irradiation induced modifications 2.8 Perspectives of Ion Solid Interaction 2.9 Summary 2.10 References CH-3: Ion Beam Analysis 3.1 Introduction 3.2 Proton Induced X-ray Emission (PIXE) 3.3 Rutherford Backscattering Spectrometry (RBS) 3.4 Ion Channelling 3.5 Medium Energy Ion Scattering [MEIS] 3.6 Low-energy ion scattering spectroscopy (LEIS) 3.7 Elastic recoil detection analysis (ERDA) 3.8 References Appendix: Applications of the PIXE technique CH -4: Engineering of Materials by Swift Heavy Ion Beam Mixing 4.1 Introduction 4.2 SHI induced IBM for Material Processing 2.1 Adhesion improvement through IBM 2.2 Metal silicides and germanides by IBM 2.3 SHI induced mixing in metal/ metal interface 4.3 Interface modification in thermodynamically immiscible systems 4.3.1 Study on the SHI induced interface modification of Pt/C and Ni/C 4.3.2 SHI induced IBM study on the Fe/Bi interface 4. 4 Conclusion and future prospects 4. 5 References CH-5: SHI for Synthesis and Modifications of Nanostructured Materials 5.1 Introduction 5.2 Synthesis of Nanostructured Materials under the effect of electronic excitations 5.3 Nano Tracks and Ripple formation by SHI Irradiation 5.4 Modification of nanoparticles under dense electronic excitation 5.5 Structural evolutions produced by Swift Heavy Ions 5.6 Summary 5.7 References CH -6: Engineering the properties of Materials with SHI 6.1 Carbonaceous Materials 6.2 Polymers 6.3 High Temperature Superconductors 6.4 Band Gap engineering in Semiconductors 6.5 Transparent Conducting Oxides 6.6 Transition Metal Oxides 6.7 Diluted Magnetic Semiconductors [DMS] 6.8 Plasmonic Materials 6.9

Quasicrystals 6.10 Magnetic materials 6.11 Random Access Memory (RRAM) 6.12 Material for Hydrogen
Production 6.13 References EAN/ISBN : 9789400712294 Publisher(s): Springer, Berlin, Springer Science
& Business Media Format: ePub/PDF Author(s): Avashti, Devesh Kumar - Mehta, Girijesh Kumar
