Handbook Of Statistical Bioinformatics

[DOWNLOAD HERE](#)

From the content:- - I: Accuracy Assessment of Consensus Sequence from Shotgun Sequencing- Statistical and Computational Studies on Alternative Splicing- Using Sequence Information to Predict TF-DNA Binding- Computational Promoter Prediction in a Vertebrate Genome- Discovering Influential Variables: A General Computer Intensive Method for Common Genetic Disorders- STORMSeq: A Method for Ranking Regulatory Sequences by Integrating Experimental Datasets with Diverse Computational Predictions- Mixture Tree Construction and Its Applications- - II: Experimental Designs and ANOVA for Microarray Data- MAQC and Cross Platform Analysis of Microarray Data- A Survey of Classification Techniques for Microarray Analysis- Statistical Analysis of Single Nucleotide Polymorphism Microarrays in Cancer Studies- Computational Analysis of ChIP-chip Data- eQTL Mapping for Functional Classes of Saccharomyces Cerevisiae Genes with Multivariate Sparse Partial Least Squares Regression- Analysis of Time Course Data- - III: Kernel Methods in Bioinformatics- Graph Classification Methods in Chemoinformatics- Hidden Markov Random Field Models for Network-based Analysis of Genomic Data- Review of Weighted Gene Coexpression Network Analysis- Liquid Association- Boolean Networks- Protein Interaction Networks: Protein Domain Interaction and Protein Function Prediction- Regulatory Networks- Inferring Signaling and Gene Regulatory Network from Genetic and Genomic Information- Computational Drug Target Pathway Discovery: A Bayesian Network Approach- Cancer Systems Biology- Comparative Genomics and Molecular Evolution- Robust Control of Immune Systems under Noises: Stochastic Game Approach EAN/ISBN : 9783642163456 Publisher(s): Springer, Berlin Discussed keywords: Biostatistik Format: ePub/PDF Author(s): Lu, Henry Horng-Shing - Schlkopf, Bernhard - Zhao, Hongyu
