

Fibrinolytic Bacterial Enzymes With Thrombolytic Activity

[DOWNLOAD HERE](#)

Stress, high blood pressure, smoking, pollution, fast foods, overweight, excessive travelling, surgery, less movement are common features in our modern life. These features are risky for blood clotting disorders. According to WHO, over 29 of the total mortalities worldwide are due to thrombosis. By the year, 2020 cardiovascular diseases (CVDs) may cause an estimated 25 million deaths per year, thus antithrombotic therapy is of great interest. The available thrombolytic agents such as urokinase are highly expensive, antigenic, quite unspecific, pyretogenic and hemorrhagenic. Therefore, the production of fibrinolysing enzymes, which rapidly dissolve thrombi within the vascular tree, without the detriments by microorganisms, as described in this book, is the desirable aim of today's research. EAN/ISBN : 9783642249808 Publisher(s): Springer, Berlin Discussed keywords: Streptokinase Format: ePub/PDF Author(s): Kotb, Essam
