If you take Rock,Funk,Blues,Jazz and mix it up with some ambient electronics you only touch the tip of the iceberg of this kick ass album which merges the organic sounds of Hammonds,Rhodes and Vintage Guitars with the synthetic algo-rythems of cybersound 12 MP3 Songs ELECTRONIC: Funk, JAZZ: Jazz Fusion Details: Whymsonics, (pronounced "whims-onics"), is the collective term for the complex brain functions of Kevin Whyms, composer, arranger, programmer, engineer and producer. I am from Dublin in Ireland. I have studied music throughout my whole life and also hold a qualification in Sound Engineering and Music Production. I most recently completed a Jazz Fusion course in Sydney Conservatorium of Music. This album was recorded in my private studio and all the music is performed by me. There is a healthy mix of Chilled beats, Jazz, Rock, Ambience and Electronics throughout this album. There are wide orchestrated stereo soundscapes providing background for Hammond organs, Rhodes pianos and layers of vintage guitars, not to mention thought provoking lyrics and some vocal wizardry. This album is the perfect soundtrack for any subconscious thoughts that may be lurking in the back of your mind
