

## Mp3 Virtual Server - Upgraded

[DOWNLOAD HERE](#)

A very innovative band concept which is made up of DJ Ram from Russia who does all the music, mixing, and programming, together with several guest singers pulled from different bands from around the world.

12 MP3 Songs ELECTRONIC: Pop Crossover, POP: with Electronic Production Details: This interesting release by the collaborative Virtual Server project combines two ideas into one low-priced CD. The first half of the album completely reconstructs vocal tracks from the "Installed" album, re-arranging and adding all new music with a completely different mood (thus the new titles). The guest vocalists from bands like Neuropa, Brave New World, Beborn Beton are still present, but the songs sound like something completely different from what was released on "Installed". Then, the second half of the album features rare remixes of "Fallen" that were previously only released in Russia, plus the radio edit of the popular club track "Why Would I". If you're looking for dark but uptempo club music, plus some wonderfully energetic trance / synthpop fusion material, then "Upgraded" will hit the spot.
