

Signaling Pathways And Molecular Mediators In Metastasis

[DOWNLOAD HERE](#)

From the contents: Preface.-1. Introduction.I. Local invasion.-2. Reactivation of Epithelial Mesenchymal Transition in Invasive and Metastatic Cancer.-3. Biomechanical ECM Switches and Tumor Metastasis.-4. Moving aggressively: S100A4 and Tumor Invasion.- 5. Shift in TGF- β -induced signaling as culprit for local invasion and dissemination.-6. Role of Rac1-GEF and Dock180 in mediating tyrosine-kinase stimulated glioma invasion.- 7. Impact of tumor hypoxia, Src and Met signaling in the dissemination of tumor cells.II. Homing and colonization at distant sites.-8. Cellular and Molecular Biology of Cancer Cell extravasation.- 9. Role of CXCL12 and CXCR4 in tumor biology and metastasis.-10. Transcription factors Stat5a/b and Stat3 in prostate cancer growth and metastases.-11. Survival and growth of early metastatic foci in the bone: Role of the α -receptor for Platelet-Derived Growth Factor.-12. Androgen receptor in regulation of prostate cancer progression and metastasis.- 13. Integrin signaling in angiogenesis and metastatic progression in the brain.-14. Tumor and host determinants of pulmonary metastasis in bladder cancer.-15. The Influence of metastatic breast cancer on the bone microenvironment. Index. EAN/ISBN : 9789400725584 Publisher(s): Springer, Berlin, Springer Netherlands Discussed keywords: Metastasen Format: ePub/PDF Author(s): Fatatis, Alessandro
